

# Input module INPUT 8 (24 VDC)

Module for up to 8 digital inputs for programming the outgoing circuits

One LED per input indicates its status.

3 LED indicate the status of the data bus.

**Functionality** By means of external floating contacts, each of the eight inputs can be allocated to one or more circuits of the emergency lighting system.

**Status tracking via LED** The status of each individual input as well as the status of the data bus is indicated via LEDs.

One LED per input indicates its status:

- LED alight.           The external switch is closed.
- LED not alight.       The external switch is open.

**Installation** The output module can be fitted in the control centre or in the sub-distributors of the emergency lighting system. **Only one bus cable (LAN CAT 7)** is required.

**Technical data**

Inputs:	8 x 24 VDC
Supply voltage:	24 VDC
Dimensions (WxHxD in mm):	105x90x58
